Subject

I.D. JOE BLOW

Operator

Actual Printed Results

- Unique on-board memory documents all test parameters
- Permanent documentation of last 500 tests
- No printer required for memory function

What is Sequence™ Software?

Sequence is Lifeloc's customizable program compliance software for evidential testing. With Sequence software the operator is guided step-by-step through their testing process to maintain operator conformity and help ensure valid test results.

What is DataTrak™?

This software offers a simple method to download test results from your FC20 to a PC. Many options are available for download such as last test, all tests and a selected range or group of tests. Calibration and Calibration Check data can also be downloaded.

Once the tests are downloaded they can be sorted, printed and archived.

DataTrak includes Remote Diagnostic capability allowing the PBT user to e-mail unit parameters to Lifeloc Technical Support Group for quick diagnostics.
